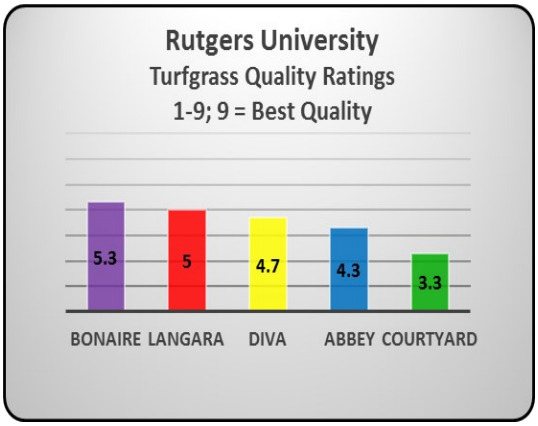
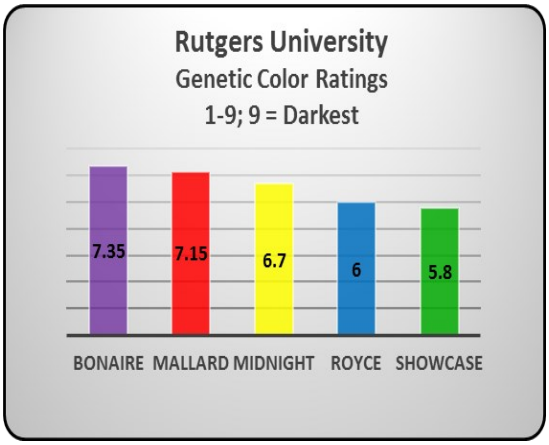
BONAIRE

Kentucky Bluegrass

Bonaire exhibits above average turf quality, good establishment and moderate spring vigor. Since **Bonaire** is a "Shamrock" Type, disease tolerances are moderate to good for leaf spot disease and stripe smut. **Bonaire** is an excellent replacement for the "BVMG" types, which are highly susceptible to rust. It has a medium dark green color and has excellent Rhizomatous development for sod production. As a Shamrock Type, **Bonaire** is a real workhorse in any blend or mixture in which strong rhizomes, sod strength and wear tolerance are needed, all while providing excellent value.



Bonaire is great for sports fields, high traffic areas and where recuperative is needed. It is an excellent value for sod production and any turfgrass user.



Features & Benefits

> QUICK ESTABLISHMENT
> EXCELLEND RESISTANCE TO DISEASE
> MEDIUM GREEN UNIFORM COLOR
> STRONG PERFORMER IN HIGH TRAFFIC AREAS WHERE DURABILITY AND QUICK RECOVERY ARE NEEDED
