

# ALLAIRE III

## Perennial Ryegrass

Value

Innovation

Service

Expertise

Blending innovation and value into exceptional seed products. Mixing incredible service and expertise to form lasting relationships.

**Allaire III** Perennial Ryegrass is the latest generation of turf type Perennial Ryegrasses specifically selected for its fine texture and medium dark green color to mix well with other species such as Kentucky Bluegrass and Fine Fescue. The most popular species by volume produced, Perennial Ryegrass is an aggressive grass that quickly germinates under varied conditions. It forms an attractive turf with excellent color, density, and wear tolerance. Ryegrass reduces erosion, competes against weed invasion, and is highly resistant to damage from surface feeding insects when enhanced with a beneficial fungus called endophyte. Ryegrass is ideal for renovating poor turf areas. In warm season climates, Perennial Ryegrass has become the standard for overseeding dormant Bermuda Grass, extending aesthetics and use year-round. Mixtures with other species, like Kentucky Bluegrass, improve disease response over that of either species alone.

**Allaire III** is a great choice for permanent turf applications on golf course fairways and roughs. It is a year round performer on home lawns, parks, play areas and athletic fields.

### Features & Benefits

- > EXCEPTIONAL TURF DENSITY WITH EXCELLENT DARK GREEN COLOR
- > DEMONSTRATES A QUICK TRANSITION IN BERMUDA OVERSEEDING APPLICATIONS
- > RAPID GERMINATION AND ESTABLISHMENT FOR FASTER USE
- > GERMPLASM FROM A BROAD GENETIC BASE OF CULTIVARS
