

HEATHLAND

Chewings Fescue

Value

Innovation

Service

Expertise

Blending innovation and value into exceptional seed products. Mixing incredible service and expertise to form lasting relationships.

Heathland Chewings Fescue is the latest generation of Fine leaf Fescues, achieving new performance heights in quality, low maintenance requirements and drought-tolerance. For landscaping and golf course applications in which fertilization and irrigation are limited, **Heathland** is proving to be a superior choice, particularly in light of its TWCA qualification, as well as disease resistance. **Heathland** has the characteristics of Chewings Fescue, with fine leaf texture, high shade and drought tolerance as well as allelopathic qualities that resist weed overgrowth. It also requires less frequent mowing than ryegrass, tall fescue or Kentucky bluegrass, and performs well in low fertility areas such as golf course roughs. Drought tolerance is a key benefit of **Heathland**, qualifying under TWCA trials. The qualification of **Heathland** by the Turfgrass Water Conservation Alliance (TWCA) represents a big benefit of this turfgrass. The protocols for TWCA certification are highly demanding, requiring that water-starved grass maintain green covering through a series of drought simulations.

Features & Benefits

- > EXCELLENT DROUGHT TOLERANCE
- > LOW INPUT & MAINTENANCE REQUIREMENTS
- > DISEASE RESISTANCE
- > SUPURB TURFGRASS QUALITY & COLOR
- > WEED SUPPRESSION
